INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(Chapter II of the Patent Cooperation Treaty)

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference 4465-X-22934	FOR FURTHER ACTION	See Form PCT/IPEA/416
International application No. PCT/EP2004/012911	International filing date (<i>day/month/year</i>) 14.11.2004	Priority date (<i>day/month/year</i>) 14.11.2003
International Patent Classification (IPC) or national classification and IPC C01 B25/45, H01 M4/58, H01 M4/02		
Applicant SÜD-CHEMIE AG		

1. This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36.
2. This REPORT consists of a total of <u>7</u> sheets, including this cover sheet.
3. This report is also accompanied by ANNEXES, comprising: a. <input type="checkbox"/> (sent to the applicant and to the International Bureau) a total of _____ sheets, as follows: <input type="checkbox"/> sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions). <input type="checkbox"/> sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box. b. <input type="checkbox"/> (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s)) _____, containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).
4. This report contains indications relating to the following items: <input checked="" type="checkbox"/> Box No. I Basis of the report <input type="checkbox"/> Box No. II Priority <input type="checkbox"/> Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability <input type="checkbox"/> Box No. IV Lack of unity of invention <input checked="" type="checkbox"/> Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement <input type="checkbox"/> Box No. VI Certain documents cited <input type="checkbox"/> Box No. VII Certain defects in the international application <input type="checkbox"/> Box No. VIII Certain observations on the international application

Date of submission of the demand	Date of completion of this report

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/EP2004/012911

Box No. I Basis of the report

1. With regard to the language, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.
- ☐ This report is based on translations from the original language into the following language _____, which is the language of a translation furnished for the purposes of:
- ☐ international search (Rule 12.3 and 23.1(b))
- ☐ publication of the international application (Rule 12.4)
- ☐ international preliminary examination (Rule 55.2 and/or 55.3)
2. With regard to the elements of the international application, this report is based on *(replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report)*:
- ☐ the international application as originally filed/furnished
- ☒ the description:
- pages 1-32 as originally filed/furnished
- pages* _____ received by this Authority on _____
- pages* _____ received by this Authority on _____
- ☒ the claims:
- nos. 1-40 as originally filed/furnished
- nos.* _____ as amended (together with any statement) under Article 19
- nos.* _____ received by this Authority on _____
- nos.* _____ received by this Authority on _____
- ☒ the drawings:
- sheets 1/3-3/3 as originally filed/furnished
- sheets* _____ received by this Authority on _____
- sheets* _____ received by this Authority on _____
- ☐ a sequence listing and/or any related table(s) – see Supplemental Box Relating to Sequence Listing.
3. ☐ The amendments have resulted in the cancellation of:
- ☐ the description, pages _____
- ☐ the claims, nos. _____
- ☐ the drawings, sheets/figs _____
- ☐ the sequence listing (*specify*): _____
- ☐ any table(s) related to sequence listing (*specify*): _____
4. ☐ This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).
- ☐ the description, pages _____
- ☐ the claims, nos. _____
- ☐ the drawings, sheets/figs _____
- ☐ the sequence listing (*specify*): _____
- ☐ any table(s) related to sequence listing (*specify*): _____

* If item 4 applies, some or all of those sheets may be marked "superseded."

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
	<p>method for producing binary, ternary, and quaternary lithium phosphates of the formula $\text{Li}(\text{Fe}_x\text{M}^1_y\text{M}^2_z)\text{PO}_4$. Precursor compounds of the elements Li, Fe, M^1 and/or M^2 are precipitated from an aqueous solution and the precipitate is dried in a non-oxidizing atmosphere and then tempered. The particle size analysis of the lithium phosphate obtained results in a very narrow particle size distribution with an average particle size (D_{50}) of less than 3 μm.</p> <p>Therefore, the subject matter of claim 1 differs from the known method in that the precursor suspension is not dried and tempered immediately after the precipitate is obtained, but rather first subjected to a dispersion or grinding treatment.</p> <p>Consequently, the subject matter of the method claims 1-26 and 36-40 is novel (PCT Article 33(2)).</p> <p>Claim 27 relates to a product obtainable according to one of the method claims 1-26. The claim does not, however, contain any product features that would enable a person skilled in the art to differentiate the LiMPO_4 in the claim from the lithium metal phosphates in the prior art.</p> <p>The description indicates that such a product</p>

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
	<p>has a D_{90} particle value of at most 25 μm, a D_{50} value of less than 0.8 μm, and a D_{10} value of less than 0.35 μm (page 15, first paragraph).</p> <p>D2 discloses a method for producing phase-pure, homogeneous, crystalline LiFePO_4. A precursor material is precipitated from an aqueous solution and then heated to a temperature of 650–800°C. The product has the following particle size distribution: a D_{90} particle value of approximately 15 μm, a D_{50} value of approximately 7 μm, and a D_{10} value of approximately 3 μm (figure 4).</p> <p>D3 discloses a lithium-transition metal phosphate with an average particle size of less than 1 μm and a specific surface area of 2.84 m^2/g (table 1).</p> <p>Therefore, claims 27–31 are novel.</p> <p>Since the LiFePO_4 in claim 27 is novel, a composition containing it, its use as electrode material, and a secondary battery containing the composition are likewise novel.</p> <p>Consequently, claims 32–35 are novel.</p>

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**3. Inventive step**

The problem to be solved by the present application is that of providing a method for producing lithium metal phosphate that results in material suitable for the electrodes of rechargeable batteries.

The solution to this problem as proposed in the present application involves an inventive step for the following reasons (PCT Article 33(3)):

The main difference between the production method in the prior art and the method in the present application is that the precursor mixture and/or precursor suspension is subjected to a dispersion or grinding treatment. The prior art contains nothing that suggests such a treatment as relates to the production of lithium metal phosphate.

The examples indicate that the compound (LiFePO_4) produced according to the application shows better electrochemical properties, in particular at high charge and discharge rates, than a material produced according to the prior art.

The production method, the LiFePO_4 produced according to the application, its use as electrode material, and a secondary battery
